Terms and Conditions

Becoming a customer

New customers are required to fill out a customer application as well as a credit application, Amcan Bearing Company does not sell to end users, new customers must be product resellers, or OEM's.

Placing orders

Orders may be placed via email at:

- US; ussales@amcanbearing.com
- CA; info@amcanbearing.com

Or by phone

- US (866) 625-6203
- CA (877)275-6304

Terms

Net 30 days, Payment must be postmarked 30 days from date of invoice. Accounts that are past due will be placed on credit hold, orders will not be shipped without approval.

Price Policy

All prices subject to change

Cancelled Orders

Orders cannot be cancelled or changed after they are entered in our system, without consent from Amcan management.

Backorders

Backorders will be shipped upon arrival of the chain unless previously cancelled or other instructions have been given.

Return Policy

No returns will be accepted on special chain orders. Returned merchandise must have prior authorization and documentation. We will not accept packages without the correct information. RMA's can be obtained by contacting Amcan Bearing Company via above mentioned email addresses or phone numbers. You will need the purchase order number and part number in order to obtain the documentation. Returns are accepted within one year of purchase.

All items are subject to a restocking fee unless:

- The product is defective; or
- We shipped you the incorrect chain.

A credit will be applied to the customers account after the chains have been received and inspected to be sure they meet the following criteria:

- Customers are responsible for all outbound and incoming freight for returned chain, unless its being returned for a warranty claim.
- All returned chains must have the RMA# included.
- All returned chains must be new, sellable condition. We will not accept damaged, used or previously installed chain.
- All returned chain must be active selling products, we will not accept inactive products.

Any return that does not meet these requirements will be disposed of or sent back to the customer at their expense.

The material in this catalog is proprietary information of Amcan Bearing Company and cannot be reproduced or used without consent.

Chain Maintenance

To achieve satisfactory performance and service life, the roller chain transmission system should be maintained properly. If the selection and assembly of shafts, bearings, chains and sprockets are proper, we should establish a maintenance system to ensure that the transmission system works well.

- a) Proper amount of lubrication is available in the transmission system
- b) There is no obstruction in the transmission system;
- c) Replace the damaged chains and sprockets in time;
- d) Replace the worn chains and sprockets in time;
- e) The alignment of shafts and sprocket tooth faces should be accurate;
- f) Chains should be properly tightened;
- g) Protective devices are fixed correctly and in good condition.

The roller chain drive should be inspected after the initial 50 hours of operation. A continuous inspection of roller chain drive should be carried out after every 500 hours of operation under normal working conditions, and after every 200 hours of operation under tough working conditions. Experience shows that the inspection interval may be longer or shorter and it depends on the situation.

For some common problems please refer to “Troubleshooting”.

Problem	Probable Cause	Solution
Chain part lost	<ul style="list-style-type: none"> - Fixing error - Lost after broken 	<ul style="list-style-type: none"> - Replace the chain. - Find out the cause and replace the chain.
Rusts present on chain	<ul style="list-style-type: none"> - Exposed to moisture - Lubricant contains water - Inadequate lubrication 	<ul style="list-style-type: none"> - Replace the chain. - Replace lubricant to ensure that the lubricant system is water-proof, and replace the chain. Provide proper lubrication according to the operating conditions, and replace the chain if necessary.
Excessive noise	<ul style="list-style-type: none"> - Obstruction in the chains path. - Chain casing or bearings are loose. - Chain excessively slack or tight - Worn chain or sprockets - Misalignment of sprocket - Inadequate lubrication. - Chain pitch size too, large - The sproket doesn't have enough teeth. 	<ul style="list-style-type: none"> - Replace the chain and remove the obstruction - Tighten all nuts and bolts. - Adjust the centre distance if possible or replace the chain. - Replace the chain and where necessary the sprockets. - Recheck alignment to maintain normal drive conditions. - Improve the lubrication method to ensure the proper amount of lubrication is available in the bearing areas. - Check the chain selection and replace it with a smaller pitch chain. - Check if it can be replaced with larger sprocket. Otherwise, it should be redesigned.
Wear on the inside of the plate and one side of sprocket	<ul style="list-style-type: none"> - Misalignment of sprockets 	<ul style="list-style-type: none"> - Recheck alignment to maintain normal drive conditions.
Chain sticks to sprocket	<ul style="list-style-type: none"> - Worn sprockets - Misalignment of sprockets 	<ul style="list-style-type: none"> - Replace the chain and where necessary the sprockets. - Recheck alignment to maintain normal drive conditions.
Chain climbing up on the sprocket	<ul style="list-style-type: none"> - Chain excessively slack - Worn chain or sprockets - High overload 	<ul style="list-style-type: none"> - Tighten the chain. - Replace the chain and where necessary the sprockets. - Replace the chain and avoid overloading.
Spring clip broken or lost	<ul style="list-style-type: none"> - Spring clip improperly fixed - Obstruction in the chains path - Chain vibration - Exorbitant running speed 	<ul style="list-style-type: none"> - Fix the spring, clip properly according to manufacturer's requirement. - Replace the chain and remove the obstruction - Replace the chain and reduce the vibration by using larger sprockets. - Replace the chain and lower the running speed by using smaller pitch chain.
Rusts present on naked chain surface	<ul style="list-style-type: none"> - Exposed to corrosive condition 	<ul style="list-style-type: none"> - Replace the chain and keep away from corrosive condition.
Flaws present on side plate (Stress corrosion)	<ul style="list-style-type: none"> - Exposed to corrosive condition 	<ul style="list-style-type: none"> - Replace the chain and keep away from corrosive condition.

Problem	Probable Cause	Solution
Chain Stiffens, starts to whip	<ul style="list-style-type: none"> - Obstruction in the chains path - Inadequate lubrication - Misalignment of sprockets - Inner Corrosion - The pin bent due to high overload 	<ul style="list-style-type: none"> - Clean and lubricate the chain again. - Replace the chain and use proper lubricant method. - Replace the chain and where necessary the sprockets - Replace the chain and find out the cause of corrosion to protect the chain. - Replace the chain and avoid overloading.
Pin rotates	<ul style="list-style-type: none"> - Inadequate lubrication - Overload 	<ul style="list-style-type: none"> - Replace the chain and provide proper lubrication according to the operating conditions. - Replace the chain and avoid overloading.
Elongation of side plate hole	<ul style="list-style-type: none"> - Inadequate lubrication - Overload 	<ul style="list-style-type: none"> - Replace the chain and provide proper lubrication according to the operating conditions. - Replace the chain and avoid overloading.
Elongation of side plate hole	<ul style="list-style-type: none"> - Overload 	<ul style="list-style-type: none"> - Replace the chain and avoid overloading.
Side plate fatigue fracture	<ul style="list-style-type: none"> - System loading is greater than the capacity of the chain 	<ul style="list-style-type: none"> - Replace the chain and reduce the dynamic load. Or redesign the system by using larger pitch chain. - Replace the chain and where necessary the sprockets. Avoid overloading. Or redesign the system by using larger pitch chain.
Pin fails Side plate fails	<ul style="list-style-type: none"> - System loading is greater than the capacity of the chain 	<ul style="list-style-type: none"> - Replace the chain and reduce the dynamic load. Or redesign the system by using larger pitch chain. - Replace the chain and where necessary the sprockets. Avoid overloading. Or redesign the system by using larger pitch chain.
Side plates are worn	<ul style="list-style-type: none"> - The chain rubs against some obstruction 	<ul style="list-style-type: none"> - Replace the chain and remove the obstruction

Packaging

Amcan Bearing Company supplies chains in 10ft lengths in rust prohibitive boxes or 100ft reels (50 ft for 80 pitch and higher) Custom lengths can be supplied upon request..

Connecting Links

Connecting links are supplied standard with Amcan Chains. Additional Spring, Cotteded, or Off-Set connecting links are available upon request. In normal applications an odd number length of links will require a spring or cotteded connecting link. For lengths with even number of links Off-Set Connecting Links should be used to convert links from an even number of links to an odd number of links.

Materials and Temperature Limitations

Amcan Bearing Company provides chains that are constructed of high quality, heat treated carbon steel; and can be used at temperatures between 0^of and 350^of. As well, it can be used at higher temperatures up to 500^of, however capacity decreases as temperature rises over 350^of. At 500^of, capacity is approx. 50% of normal.

Stainless Steel Precision Roller Chain is constructed of high quality 304 grade stainless steel and provides an excellent solution for corrosive environments. As well, Stainless Steel Precision Roller Chain can be used at temperatures below 0^of and above 500^of. Stainless steel 316 available upon request.

Amcan Precision Roller Chain is also available in Nickel Plated and Dacromet Coated. This chain is ideal for washdown and humid environments.

Structural Dimensions

Amcan Precision Roller Chain is made in compliance with ANSI B29. 1 standards. The dimensions of roller chains components are produced in direct relation to pitch of the chain as follows;

Roller Diameter .625" x Pitch	Pin Diameter .3125" x Pitch	Plate Diameter .125" x Pitch
----------------------------------	--------------------------------	---------------------------------

For example for 40 chain; (1/2 inch pitch)

Pitch .50"	Roller Diameter .50" x .625" .3125"	Pin Diameter .50" x .3125" .15625"	Plate Thickness .50" x .125" .0625"
---------------	---	--	---
