

THE **POWER** OF **SOLUTION**

Now Offering

High Temp German Bearings

Amcan Bearing now offers SWC deep groove ball bearings with 4 standard high temp lubricants, with temperature ranges between 260°C to 350°C (500°F to 662°F)

Bearings come with increased radial clearance (C5), ideal for high heat environments. Additionally, a manganese phosphate coating helps to ensure both corrosion protection and improved adhesion of lubricants. Lastly, SWC has incorporated a riveted steel cage which provides increased stability with low friction.

SWC high-temp deep groove ball bearings are available with a single shield (ZR), double shields (2ZR), or open.

A high-speed option is also offered. These bearings are suitable for environments with temperatures ranging up to 250°C, and have significantly greater limiting speeds than the standard high-temp bearings. These bearings come with steel shields (2ZR) or Viton seals (2VSR).

In addition to deep groove ball bearings, Amcan also stocks SWC hightemp insert bearings, and is able to offer high-temp spherical and tapered roller bearings on request with short lead times.
